- 8 Mission Planning and Execution
- 9 Working with Other Militia Units
- 10 Recommended Readings

"Know your enemy and know yourself and you can fight a hundred battles with no danger of defeat."
-- Sun Tzu

Chapter 1

How to Recruit Members

The rapid growth of paid police informers, snitches and people who watch too many turn-in-your-neighbors television programs has created an national atmosphere of distrust.

The cardinal rule for initially setting up your militia unit is to work with people you trust and have known for a long time. This does not guarantee that someone will not blab their head off if coerced by experienced interrogators, but it definitely helps.

Each member can be responsible for recruits and, after clearing it with the leadership, should bring them to a meeting.

Initially, prospects should be introduced to those with the best instincts for recognizing potential problems. Use casual conversation to gauge the depth of his/her commitment. If all goes well, introduce the topic of total resistance into the conversation. This helps to measure whether feelings about conventional law and order might override deeper moral concerns. Passing this, they should be taken to a low-level militia meeting and evaluated by the soldiers with whom they will be working.

After this meeting, troops shall be queried as to their feeling about each new recruit and the level of confidence they have in him/her.

When in doubt, move them into positions of low sensitivity, i.e., cook, clerk, etc., or out of the group entirely.

Others will eventually hear of your group and come looking to sign up. These people may be sincere and should be treated with respect. They still must pass the "vibes" test, and a check of who and what they are should be done. When the shit hits the fan, expect to see a large influx of members which may strain your security procedures, but don't lighten up. Stick to your routine, and you should be alright.

All initial personnel should be groomed as leaders and should be frequently reminded that they will be expected to teach what they learn. This method of leadership is called Top-Down Preparedness.

How many members are enough? How many can you handle? Supply, food, and other administrative problems start getting pretty complicated with even two dozen members. As your unit grows, be prepared to assign people to more specific duties like those seen in regular armies.

Take your time building your group, and work for quality and sincerity, not quantity.

Chapter 2

Security

Good security minimizes the possibility of being surprised and the consequences of being surprised.
Loose lips in warfare get people killed.

Keep information on a need-to-know- basis. Play it close to the vest, especially about upcoming operations.
Ease new members into positions of trust. Give them small amounts of information at first,
and listen for it being repeated by anyone.

Enforcement of security procedures should be one of the highest priorities, with reprimands
and other punishments administered equal to the offense.

Watch what you say on radios and telephones. Presume all transmissions are being monitored
--even when you're on hold. Do not openly discuss any of your activities!

Your unit can initially masquerade itself as a paintball team, which justifies the people in fatigues.
Web gear, helmets and guns should be brought to exercises in duffel bags.

Avoid storing incriminating tools or other equipment in your home or vehicle.
This includes maps and documents. Use a safe house, storage locker or hide them in the woods.

Avoid predictable patterns. Vary the days, nights, locations and methods you use.

When on missions, do not carry Ids, wallets, key rings or anything that might identify you.

Security Oaths

Throughout history, secret groups have reinforced cohesion with the use of secrecy and loyalty oaths.
It is important that members openly and directly declare their willingness to protect one another.
Psychologically, the act of swearing loyalty is of far greater value than the assumption of the same.
The memory of the event can give the added ounce of strength under enemy questioning,
when most groups come unraveled.

The Militia Soldier's Oath

I do swear, before God and the personnel assembled that I will:

- * Follow the orders of my leaders to the best of my abilities.
- * Keep the identities of all my fellow soldiers a secret and not give in under threats, torture,
or prison to the point of death.
- * Keep all knowledge of militia activities and resources a secret to the point of death.
- * Not abuse the authority or the power of my weapons.
- * Be a friend of the common citizen.
- * Never forget that I am the last hope of freedom.

Chapter 3

Physical Fitness

The combat soldier is tough, but the average citizen is soft.

Your job will be to whip your group into fighting shape in a short period of time.

Far too many will want to depend on their weapons. It is important that partisans realize how being physically fit is in their best interest.

Attaining physical fitness is not an overnight process.

The body must go through two stages.

First is the toughening stage which lasts for about two weeks while the body goes through a soreness and recovery period.

The second stage is slow improvement. Blood circulation improves, and the body becomes more efficient.

The body reaches its maximum level of performance between six and ten weeks of daily exercise.

The physical peak should then be maintained.

Shown is a series of exercises done with a rifle.

Start doing perhaps as few as five repetitions (reps) of each and increase to 50 or 75 over a few weeks.

Supplement with standard pushups, running and obstacle courses.

A. FOREUP, BEHIND BACK EXERCISE 1

B. LUNGE SIDE, TURN AND BEND EXERCISE 2

C. FOREUP, BACK BEND EXERCISE 3

D. UP AND FORWARD EXERCISE 4

E. FOREUP, FULL SQUAT EXERCISE 5

F. ARMS FORWARD, SIDE BEND EXERCISE 6

Chapter 4

Equipment List

The following is the bare necessity equipment for the individual partisan Essentially, everyone should build at least two sets of everything from boots to helmets, and keep them at different locations. Try to secure genuine G.I issue. Avoid “G.I. Style”.

- Boots (two pair)
- Socks (wool and cotton, six pair of each)
- Gloves (leather with wool liners, two pair)
- Underwear (several pair)
- Combat fatigues (olive drab [OD] or woodland camouflage [Camo]), four sets
- Waterproof poncho and liner
- Field jacket and liner
- Sleeping bag suitable for weather conditions
- Sleeping pad
- Long underwear (two pair)
- Kevlar helmet or steel pot with liner
- Beret and/or boonie hat
- Head net (insect protection)
- Camo gear (paint, veil, mask, or burnt cork)
- Pistol belt
- Ammunition pouches (at least two)
- Suspenders for pistol belt
- Matches in waterproof container
- Signal mirror
- Alice pack (medium or large)
- Entrenching tool
- Rifle or shotgun
- Pistol
- Holster
- Ammunition (minimum 1,000 rounds per weapon)
- Gas mask
- Compass and case
- Flashlight with extra batteries
- Electrical tape (black)
- First aid kit and belt pouch
- Utility knife (Swiss army is best)
- Combat knife (bayonet or large sheath knife)
- Personal hygiene kit (soap, box, washcloth, towel, toothbrush, paste, nail clippers, comb, shampoo)
- Tent or shelter half
- Stove (sterno, hobo, or other)
- Rope (25’ length)
- Radio (Two-way and AM/FM) with extra batteries
- Binoculars (7x35 power minimum, 10x50 preferred)
- Insect repellent (G.I. “bug juice” or Deep Woods Off)
- Mess kit (including knife, spoon, fork)
- Two canteens with insulated covers
- Canteen cup
- Water purification tablets
- Toilet paper
- Wrist watch

- Note:** 1. Special attention should be paid to acquiring good cold weather and rain gear.
2. Getting caught with all this equipment under conditions of martial law can get you in plenty of trouble. Hide it good.

First Aid Contents:

Moleskin for blisters n the feet
Snake bite kit
Chigger-rid or clear nail polish (cover fresh bites)
Band-Aids (one full box, assorted sizes)
4"x4" bandages (10 minimum)
Large Kotex "napkins" for serious bleeding. (4)
Hemostats (two pair, new and unused)
Eye bandage pad (2)
Roll of 2" gauze
Ace elastic bandage with clips
Betadine ointment (one tube)
Caladryle (one tube)

Gear Carrying Rules for Patrols:

1. Keep your load as light as possible.
2. Know your equipment.
3. Assemble the equipment properly.
4. Know the location of every item on your person and in your equipment.
5. Include personal medications.

Chapter 5

Weapons

The story of how Mao Tse Tung obtained enough weapons and supplies to defeat the large Japanese and Imperial Chinese armies simultaneously should be repeated to every militia soldier.

Mao, having observed that his foes were well supplied, applied both bandit logic and political psychology when he informed his enemies “Where will China get the weapons and supplies to wage a war of liberation? We will get them from you.” And so he did. Mao’s troops got so much material from Chiang Kai Shek’s forces that they nicknamed him, “the people’s quartermaster”.

If the enemy has it, and you need it, go get it.

Start accumulating and studying military manuals about weapons you may encounter in the field, i.e., Light Anti-tank weapons (LAWs), TOW and Stinger missiles, M-60 machineguns.

Rifles, Pistols, Shotguns

We have seen people spend huge amount of money on exotic weapons. This may not be such a good idea.

You should consider:

- * Will you be able to access parts for your weapons?
- * Does it shoot U.S. military or police ammunition? If not, be ready to part with it when it runs dry.
- * If you’re just now obtaining weaponry, invest as much as possible in rifles that shoot 5.56 and 7.62 NATO ammunition.
- * Handguns should fire the 9mm cartridge and shotguns should only be bought in 12 gauge.

While most militias are currently training with SKS and AK-47 rifles, leaders are urged to familiarize themselves with fully with the AR-15/M-16 because that’s what you and your troops will eventually be using.

Other calibers and gauges are ok to get you started, but don’t get attached to them.

Primary Pyrotechnics for the Militia

You will encounter plenty of munitions as the war expands, but initially you’ll need to make your own. Listed below are two types of “kitchen table” weapons everyone can construct.

THERMITE:

Thermite is a fuel-oxidizer mixture that is used to generate tremendous amounts of heat. It is a mixture of iron oxide (rust) and aluminum, both finely powdered. When it is ignited, the aluminum burns and extracts the oxygen from the iron oxide. The reaction produces a combined temperature of about 2,200 degrees Centigrade---half the heat produced by an atomic bomb. It is difficult to ignite, however, but once it gets going, it’s one of the most effective fire starters and metal melters around.

No special procedure or equipment is required to make Thermite. Simply mix the two powders together, and try to make the mixture as homogeneous as possible. The ratio of iron oxide to aluminum is 50/50 by weight, and can be made in any quantity.

An easy method of producing a quantity of rust:

- * DC power source. An electric train transformer will do perfectly.
- * Attach positive wire to a common nail with an alligator clip.
- * Immerse nail in a jar of water.
- * Insert negative wire into water (tape wire to edge of jar)
- * Let the rust factory sit overnight. In the morning there will be a dark red gunk in the water. Filter out through a cloth and spread thin and allow to dry.

Ignition of Thermite can be accomplished by:

- * Common sparkler-type fireworks inserted in the Thermite as a fuse.
- * Adding an easily ignited magnesium strip as a fuse.

Packaging: Thermite can be used as loose powder, poured into intake manifolds, in bags or made into incendiary "pipe bombs" from two inch diameter aluminum pipe. Use at least ¼ pound on every job.

Target Suggestions: Use on motor blocks, mortar and cannon barrels, electric boxes, supply depots, ammo dumps, or anything you want to burn really hot!

MOLOTOV COCKTAILS

First used by the Russians against German tanks, the Molotov cocktail is extensively used by resistance fighters worldwide. They are simple to make, and can produce devastating results.

By taking any flammable material, such as gasoline, diesel fuel, kerosene, ethyl or methyl alcohol, lighter fluid, turpentine, or any mixture of the above, and putting it into a large glass bottle, anyone can make an effective firebomb. After putting the flammable liquid into the bottle, put a piece of cloth in the top of the bottle so that it fits tightly. Then, wrap some of the cloth around the neck and tie it, but be sure to leave a few inches of loose cloth to ignite. Invert the bottle for a few seconds to soak the wick. To use, just light the wick and throw the bottle. If the burning cloth does not go out, and if the bottle breaks on impact, the contents of the bottle will splatter over a large area and burst into flame.

Flammable mixtures such as kerosene and motor oil should be combined with a more volatile and flammable liquid, such as gasoline, to insure ignition.

A mixture of tar or grease and gasoline will stick to whatever it strikes, and burn hotter; plus be more difficult to extinguish. Stuffing the bottle with shredded Styrofoam cups and then adding gasoline creates a homebrewed napalm. Mixtures such as these must be mixed or shaken well before being lit and thrown.

Chapter 6

Combat Communications

Combat communications is one of the most important facets of resistance fighting. The enemy has large stocks of scanners, jammers, and locators. They are high-tech, so we must go “low-tech“.

At the D-Day invasion of Normandy, soldiers relied on a kids toy, called the cricket, as a primary method of identifying friend from foe. It made a “click-clack” noise, and the code was, one click-clack as challenge, two click-clacks as response. This code can be easily modified for your particular group.

Passwords, mirrors and even colored smoke signals can move information around the battlefield. Create your own codes and change them often.

During times when you may be living pretty much as usual, Phone Tree Communication will be an asset for rapid transmission of alerts. The method is simple. Each person on the “stem” of the tree is responsible for calling five people. Once the first person makes their calls, the tree branches out and in a few minutes a message can travel numerous directions. For security, use pay phones.

Chapter 7

Strategy and Tactics: Field and Urban

The Strategy

The following strategy has been proven effective for guerrilla warfare.

- * When the enemy advances, we retreat.
- * When the enemy camps, we harass.
- * When the enemy tires, we attack.

The Tactics

* **Know your enemy**

Become familiar with all the branches of law enforcement and military units in your area.

Know the numerical size of the enemy units and their fire-power.

Know your enemy's response time and avenues of approach. Know their strengths and weaknesses.

Learn to recognize all their vehicles and monitor their communications.

* **Attack the enemy at his weak points**

The enemy cannot be strong everywhere. Seek and find the decisive targets.

* **Attack only when you have 95% probability of victory**

Good reconnaissance, superior fire-power, speed and controlling the time and place of the attack

Increases your chances of success.

* **Never set patterns.**

When a method works, use it. But do not continually use the same method of operation.

Vary your appearance, your vehicles, methods of obtaining supplies, avenues of attack, retreat and types of targets you attack.

* **Strike where you are least expected.**

Many times the most important target is weakly defended.

Look for over-confident guards, or those who have been the same job for too long and their guard is down.

* **Never hesitate to use your most powerful weapons.**

When the shooting starts, don't hold back. Go for the jugular.

* **Always out-gun your enemy.**

Being the underdog may win sympathy, but won't win battles.

Stack the deck in your favor with numerical strength of at least three, but preferably four, to one over the enemy.

* **Limit the length of enemy contact to three minute.**

Engaging the enemy for longer times will allow them to radio for help, and force you into a defensive position. Shoot and scoot.

* **Never voluntarily take a defensive position.**

A defensive position is one where the enemy has you boxed in. Either attack or withdraw.

If you are attacked, unleash your most powerful weapons, neutralize the attack and relocate.

* **Do not allow the enemy freedom of movement or to make decisions.**

Mobility is life for an enemy. When that mobility is lost -- so is the battle.

* **Do not allow the enemy to bring their weapons to bear.**

This will push you into the defensive. Work fast.

* **Always prepare backup forces and vehicles.**

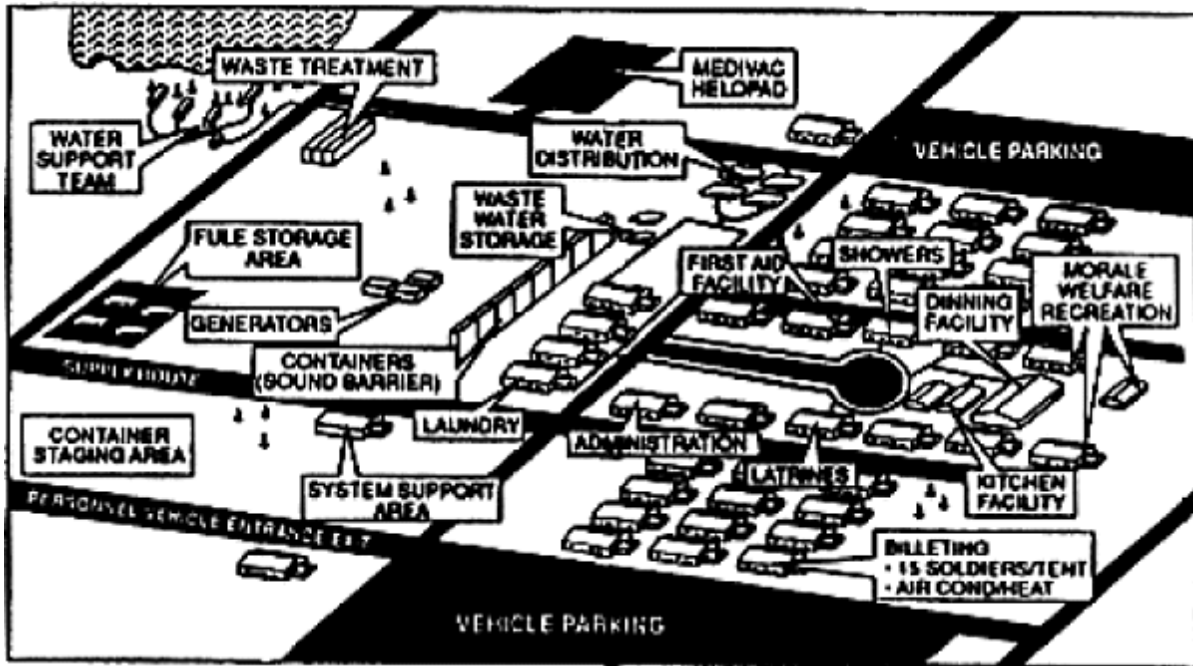

When the enemy begins to tire, bring in your reserves to finish them off.

* **Allow for unseen problems.**

Anything can happen once the shit hit's the fan. Stay flexible and adapt to the situation.

* **Never waste personnel or resources by attacking just to be attacking.**

Analyze the war and battle situation as a whole, find the decisive targets and get them.

550-Soldier Force Provider Module

When the Military comes to your area they will set up their camps like this.

Chapter 8

Mission Planning and Execution

Before you go out on a mission:

- * **Terrain.** Make a thorough map study. Make note of critical features as reported by other patrols. Note positions for observation and concealment. Roads and trails, Streams, width, depth, current, underwater obstructions. Bridges and crossing points. Footings in swamps and quagmires. Woods and thickets. Obstructing vegetation such as cactus, brambles poisonous plants. Thickness and supporting qualities of ice and snow.
- * **Weather.** Forecast. Moon phase. Time of darkness and daylight. Expected day and night temperatures throughout the mission.
- * **Enemy.** Strength, dispositions, activity by day and night. Locations of weapons, fieldworks obstacles, minefields, sentries, warning devices. Use and meaning of flares. Patrols; protective cover fire (artillery, aircraft). Attitude, morale, peculiarities. Are prisoners to be taken?
- * **Civilians.** Presence in area. Attitude. Assistance possible -- trustworthiness. Alerts by domestic animals -- barking dogs; alarms, etc.
- * **Own troops.** Other partisan activity. Supporting fires. Other support -- transportation, communication, medical. Patrols; minefields -- gaps through.
- * **Equipment and Supply.** Special weapons and equipment -- sniper scope, radio, binocular, wire cutters, rope, mine detector, night vision. Ammo, pyrotechnics, water, rations.
- * **Control.** Challenge and password. Prearranged code. March objectives, checkpoints. Messages -- when and where. Plan A, B, C.
- * **Make Tentative Plan.** Study map -- is it up to date? Study enemy situation and its effect on mission. Determine the need for supporting fires and other support. Decide strength of patrol. Select weapons, amount of ammunition, special equipment.
- * **Coordinate with others.** Other partisan units, representatives of other supporting units. If practical and possible, check to ensure that adjacent units and friendly patrols are told of your route, objective and general plan of operation. This will avoid accidental exchanges of gunfire and resultant casualties.
- * **Select Your Personnel.** A qualified second in command. Smallest number of personnel essential -- capable and in good physical condition. No colds, sneezers or coughers. No one with night blindness. If necessary, some swimmers, linguists. First aid person, guides.
- * **Issue Warning Order.** Tell your personnel that the mission is coming and timetable. Brief statement of situation. Organization of the patrol. Directions to all persons concerning weapons, equipment, uniform, removal of identification, to draw special items, ammo, rations. Camouflage. Who second in command is. Who will accompany you on mission. Assembly time.
- * **Review Reconnaissance.** Meet with second in command. Check tentative plan against terrain, situation, enemy capabilities. Select route out and alternative route of return. For night patrol, memorize critical terrain features.
- * **Complete Your Plan.** Think over possible plans and check against contingencies. If there is time, make rough sand model of terrain for checking plan. Include provisions for care of wounded. Consider assembly points. Make notes for Patrol Order.
- * **Final Coordinating.** Mortars, artillery, friendly outposts. Latest enemy information. Any additional special equipment.
- * **Issue Patrol Order.** The patrol leader gives a terrain orientation, the mission instructions.
- * **Rehearsal.** For night patrol, rehearse once in daylight and once at night. Emphasis on personnel knowing routes, assembly points, what to do on enemy contact, what to do at mission objective. How to orient on terrain, by compass, by stars, how and when to fire weapons at night.
- * **Inspect Patrol.** Faces and Equipment camouflaged. Sleeves and pant legs taped or strapped. Have each person jump up and down to check for rattles. Nothing shiny. Canteens filled (check to make sure). Fresh batteries in radios. Tuned to proper channels. Compasses checked for accuracy. Synchronize watches. Other items complete and in working order.
- * **Conduct Patrol / Mission.** Get there -- get it -- and get back!
- * **Mission Report.** Share new information with your senior officers and if needed, with friendly units. Issue propaganda release detailing damage done and hopeless position of enemy.

Chapter 9

Working with Other Militia Units

We have already seen among existing unit's a number of what we call Warlord Wannabes. Leaders that have goals that go beyond fighting the enemy and into the area of regular politics. Some of these men and women have admirable skills and political savvy, other make one wonder if living in their area of control would be any different from living under enemy oppression.

As units begin to take to the field, other unknown units will show up.

As you encounter new militias, you must meet with their leaders and determine several things”
Do you share the same politics? What is their area of operation? What are their capabilities?
Do they appear well organized, trained armed, led?

Security is important. Are they an enemy front? You don't know, and you must trust your instincts as to what to share and what to keep secret.

Providing everything is smooth between your two groups, you will want to expand your activity to coordinate your forces in battle. They may have mortar teams or heavy guns that can help in reaching your objectives with fewer casualties. This will take some training and field exercises to become fluid in battle, but it's worth it.

If you cannot work with a militia unit and don't want to engage in fighting them too, at least work to develop a politically neutral relationship and focus on fighting the enemy.
Save political arguments until after Babylon has fallen.

Breaking Out of Encirclement

The Militia Method

When surrounded, stage your breakout as soon as possible.
The longer you wait the stronger the enemy will become.

Form your personnel up in the shape of a triangle, with a wide base as your front.
This shape will work with groups of from five to twenty people. If you have full auto or selective fire weapons, you should put them in the first two rows (set on full), with semi autos making-up the tail point of your triangle.

At the decision to move out, throw White Phosphorus grenades or smoky Molotovs plus pipe bombs, toward the rear and to each side; and grenades or other explosives to the front.

Following the explosions, move forward immediately with the first row firing until their magazines are empty. Then they should go to the ground and change magazines while the second row advances, also firing on full automatic. After the second row empties their magazines, the first row should be back up with weapons on semi-automatic and firing as they move.

All weapons should continue to be fired until everyone clears the encirclement.
